INSIDE THE HYPERKEWL™ PLUS TECHNOLOGY

Our unique HyperKewl™PLUS fabric absorbs, stores and releases water within the multi-layered structure. Water is “released” through evaporation, energy is consumed, and a chill effect is created.

HOW TO USE:
1. Soak in water for 1-2 minutes
2. Gently squeeze out excess water
3. Your HyperKewl™PLUS Item is ready to wear!

Demand gear that was designed using the latest technologies available to keep you comfortable on the job. OccuNomix has been engineering ergonomic work gear for over 35 years starting with supports, head protection as well as gear bags. Gear is where our knowledge of the body at work allows us to engineer products that help workers ergonomically, some even for temperature regulation, to get through the job. We build these features into our gear so you can work longer and stay comfortable.
KNEE PROTECTION

A CRADLE FOR YOUR KNEES.

Knees are one of the most important joints in the human body. So why are you beating them up? According to the American Journal of Epidemiology, investing in knee pads decreases the risk of knee injury by 56%. That’s why we made a line of affordable knee pad solutions, with Cradle Technology™, contoured to fit the knee.

Demand more than the standard. OccuNomix FR apparel is designed to be worked in, providing color fastness and durability. Their FR goes through arc and flame resistance testing, and with third party certification you know you’re outfitted with the best keeping you safe on the job.

**STANDARDS MADE SIMPLE**

**ANSI/ISEA 107 Standard**
Since 1999, the standard has been recognized by federal, state and local authorities as well as private industry and provides performance criteria for materials used, specifies minimum areas and recommends placement of the materials. The standard’s performance requirements focus on color and brightness of garments relative to the work environment and the combined use of fluorescent and retroreflective materials to make a person conspicuous in all light conditions, day and night. ANSI/ISEA 107 includes criteria for flame resistance (FR) as an optional feature of high-visibility personal protective equipment. High-visibility apparel marked as FR must be certified as complying with one of the FR tests cited in the standard.

**ASTM F1506 and NFPA 70E Standards**
Garments that meet these standards are ideal for workers exposed to momentary electrical arc and related thermal hazards. Applications: Utility workers, Welders, First responders, Railroad workers, Oil & Gas workers.

**NFPA 2112 Standard**
Protection against flash fire. Garments that meet this standard are made from UL-approved components. The garment itself must be UL approved - if not the garment is not NFPA compliant! Applications: Electrical, Utility and Oil & Gas to name a few.

**ASTM F1891 Standard**
Electrical Arc specific to FR rainwear.

**ASTM F2733 Standard**
Protection against Flame Hazards (i.e. flash fire) specific to FR rainwear.

DUAL CERTIFIED GARMENT?
Garments are certified to:
ASTM F1506 – arc flash protection
NFPA 2112 – flash fire protection
OCX™ Flame Resistant garments are certified by UL to NFPA 2112.

That means UL has verified each garment component, the factory and the garment as a whole all comply with the safety standard for flash fire. Look for the label inside the garment with the UL symbol.

MEASURE YOUR BODY FOR A PROPER FIT

Chest Size: Taken at the fullest point of your chest. Measure just under your arms and across shoulder blades holding the tape firm and level.

Waist: Measure around your natural waistline, keeping the tape snug, but comfortably loose.

Inseam: Measure from the base of your crotch to the top of your shoe. For a more accurate measurement have someone take this measurement. You can also measure a similar pant that fits you well. Lay the pant flat with the front and back creased smooth. Measure along the inseam from the crotch to the bottom of the leg hem.
