LIBERTY GLOVE & SAFETY

Leader in the Industry

Welcome to

Liberty Glove and Safety

Liberty Glove and Safety is a complete head-to-toe safety expert. We are committed to providing exceptional safety solutions for all our customers. By constantly refining our lasting partnerships, we continue to strengthen and expand our strategic positions in:

- Research & Development
- Customized Programs
- Global Sourcing
- Inventory Management
- Training Programs
- Quality Control

4 Strategic Logistic Locations: **CA, TX, OH, GA**

We are determined to empower our leadership as a full service PPE manufacturer with performance values in mind. Through perpetual improvements we continue to embrace change, energize teamwork, and pursue growth with our partners. In everything we do, we focus on delivering the best services and reliable safety products with passion and creativity.

We are moving safety forward.

Value-Added Services

- **Pad Printing:** Logo your products at a speed of 10 times faster than silk screen printing. Having the capability to provide higher precision printing.
- **Silk Screen Printing:** We also have capabilities to print larger logos on our apparels such as DuraWear® rainwear and HiVizGard™ safety vests.
- **Heat Transfers:** For full color logo applications, this is the solution to meet your demands.
- **Vend Pack Ready:** We offer vending machine pack ready items based on your customer's requirements.
- **Private Labeling and Custom Packing** - We provide structural and controlled product factors which include competitive pricing and distribution availability. This service enhances the customer experience while promoting increased selling opportunities. This service provides low cost retail ready or banding multipacks for packing which can be store ready directly from the product cases.
- **Service Hang Tags** - We provide two different hang tag styles with customized retail markings, including UPC barcoding, product item number, and description call outs printed which are printed on tags for added value on the packaging details.
- **Direct Import Programs** - This program is catered to high volume distributors to increase buying power including product customization without compromising product quality control during the production process. This benefits the distributors with cost savings.
- **Drop Shipments** - Save time and money by using our drop shipment service as we handle your orders with care and attentiveness.

Cut Resistant Gloves Coated Seamless Gloves

Cut-resistant gloves are designed to protect hands from direct contact with sharp edges such as glass, metal, and other materials. The level of cut resistance can be improved by high performance materials like Kevlar® or composite yarns made with combinations of stainless steel, fiberglass, synthetic and high-performance yarns.

Performance characteristics are not only affected by the thickness of the shell but also the coating applied to the outside surface. Lighter weight gloves offer more dexterity, resulting in less hand fatigue. Heavier weights generally provide more cut and abrasion protection. Coated gloves enhance grip, especially on slippery surfaces.

Cut Resistant Gloves

Ultra-X™ Coated gloves made with 18G HPPE yarn

X-Grip™ Coated gloves made with HPPE yarn

V-Grip™ Coated gloves made with HPPE yarn

K-Grip™ Made with Kevlar®

Ultra-Z™ Proprietary coated gloves made with engineered yarns

Z-Grip™ Coated gloves made with proprietary engineered yarns

Arctic-Z™ Coated gloves with thermal lining

U-Grip™ Coated gloves made with HPPE yarn and steel core

Coated Seamless Gloves

M-Grip™ High density polyurethane coated (HDPU)

G-Grip™ Micro-foam nitrile coated

Q-Grip™ Ultra-thin nitrile coated

P-Grip™ Ultra-thin polyurethane coated

A-Grip™ Latex coated

ArcticTuff™ Thermal lined

American ANSI/ISEA 105-2016 Revision | Hand Safety Standards

ANSI/ISEA 105-2016 addresses the classification and testing of hand protection for specific performance properties related to mechanical protection (cut-resistance, puncture resistance, and abrasion resistance), chemical protection (permeation resistance, degradation), and other performance characteristics such as ignition resistance and vibration reductions based on standardized test methods.

The three key areas to know about are:

1. Expanded Cut-Resistance Ratings
2. New Needle Puncture Resistance
3. Improved Testing Methods

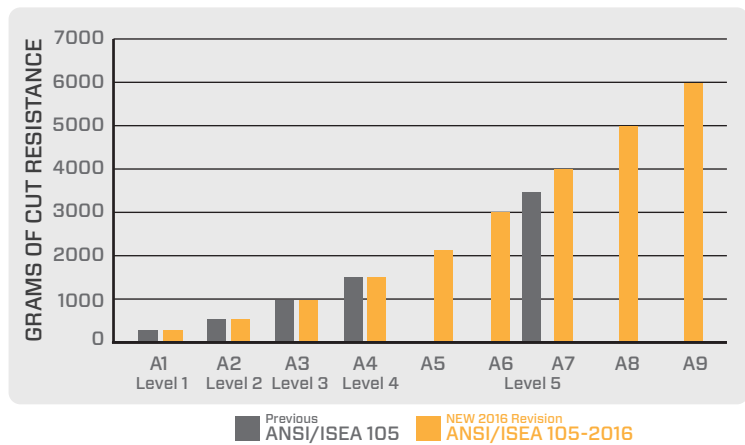

Understanding the ANSI/ISEA 105-2016 update is important when choosing the correct level of hand protection needed for workplace safety.

1 Expanded Cut-Resistance Ratings - A singular test method has been chosen and the number of classification levels has been increased from 5 to 9 levels. This 2016 updated range will now be expressed as (A1 - A9). With more accurate ratings, the end user will be able to better select the appropriate hand PPE required for their job.

NEW ANSI/ISEA 105-2016

Cut-Resistance ratings will be:

- A1** - ≥ 200 gm., light cut hazards
- A2** - ≥ 500 gm., light-med. cut hazards
- A3** - ≥ 1000 gm., light-med. cut hazards
- A4** - ≥ 1500 gm., medium cut hazards
- A5** - ≥ 2200 gm., med.-high cut hazards
- A6** - ≥ 3000 gm., high cut hazards
- A7** - ≥ 4000 gm., high cut hazards
- A8** - ≥ 5000 gm., high cut hazards
- A9** - ≥ 6000 gm., high cut hazards

NEW LGS LABELS

OLD LGS LABELS

2 New Hypodermic Needle Puncture Resistance - This will address the needs of the medical, recycling, sanitation and law enforcement industries. The test procedure uses a 25mm hypodermic needle instead of the probe that is used in the puncture resistance testing.

3 Testing Improvements - While progress has been made for the ANSI/ISEA 105-2016 standard, the cut-level standards in EU EN388 have still not been passed by Feb. 1, 2016. The gap between the two standards is closing but they should still be used separately and not compared side by side.

As a leader in the Personal Protective Equipment industry, Liberty Glove and Safety will continue to serve its customers by providing high quality hand protection by incorporating a running change that is ANSI/ISEA 105-2016 compliant. As the PPE industry changes to adopt these new standards, we will continue to offer the right protection for the job. Please contact your Liberty Glove & Safety account manager if you have any additional questions at (800) 327-8333.

380 [FOAM NITRILE]

Engineered with a lightweight, 13-gauge seamless knit and embossed waffle-pattern foam nitrile palm coating that provides optimal grip across a range of applications.

KEY BENEFITS

- + Strong grip on wet & dry surfaces
- + Open back reduces perspiration
- + Extended-cuff for added protection
- + Mimics the curvature of a human hand to reduce fatigue
- + Optimal dexterity and comfort
- + Lint-free liner

One of SHOWA's most notable innovative firsts, the groundbreaking innovation of low-modulus nitrile, natural rubber latex free hand protection. This innovation was patented in 1991 and set the bar for all others to follow. N-DEX® hand protection is recognized globally as the answer to protecting the millions of humans that are severely allergic to natural rubber latex.

Expanding on the innovation, SHOWA launched the world's first accelerator free, low-modulus nitrile glove.

The latest addition to the N-DEX family of products is the world's first biodegradable glove, SHOWA N-DEX 6105PF with EBT®. Eco Best Technology®(EBT) is a patented solution to the massive amounts of gloves that are discarded in landfills.

SHOWA
N-DEX®

PROUDLY MADE IN USA

7500PF [NITRILE]

Designed with the consumer in mind, SHOWA 7500PF is a competitively-priced 4-mil, powder-free, disposable nitrile glove.

- KEY BENEFITS**
- + Latex-free
 - + Competitively-priced
 - + Retains tactility
 - + Rolled cuff helps keep debris out

POLYMER Nitrile	THICKNESS 4 mil
LINER Disposable	LENGTH 9.5 inches
GRIP Bisque	COLOR Blue

PACKAGING : XS, S, M, L, XL, XXL
100 gloves per dispenser*
10 dispensers per case
**7500PFXXL packaging is 90 gloves per dispenser*

N-DEX®
7005/PF* [NITRILE]

The world's first 100% nitrile disposable glove, N-DEX 7005 provides unmatched performance across a range of tactical applications. Available lightly-powdered (7005) or powder-free (7005PF).

- KEY BENEFITS**
- + Decreased risk of allergies
 - + Superior durability & versatility
 - + Limited chemical protection
 - + Second-skin fit & feel
 - + Rolled cuff helps keep debris out

POLYMER Nitrile Low-modulus	THICKNESS 4 mil
LINER Disposable	LENGTH 9.5 inches
GRIP Smooth	COLOR Light blue

PACKAGING : XS, S, M, L, XL, XXL, XXXL**
100 gloves per dispenser*
20 dispensers per case
** "PF" indicates powder-free option is available
** Only 7005 is available in XXXL*

N-DEX®
7705PFT [NITRILE]

Powder-free, 4-mil, 9.5-inch, disposable low-modulus nitrile glove.
Accelerator-free formulation.

- KEY BENEFITS**
- + Free from common accelerators found in nitrile gloves
 - + Even lower risk of allergies
 - + Increased visibility due to color
 - + Chemical splash protection
 - + Rolled cuff helps keep debris out
 - + Second-skin fit & feel

POLYMER Nitrile Low-modulus	THICKNESS 4 mil
LINER Disposable	LENGTH 9.5 inches
GRIP Bisque fingertips	COLOR Fluorescent green

PACKAGING : XS, S, M, L, XL
100 gloves per dispenser
20 dispensers per case

CleaN-DEX®
C9905PF [NITRILE]

Powder-free, **5-mil, 12-inch**, disposable low-modulus nitrile glove.
Clean-room device.

KEY BENEFITS

- + Clean-room device
- + Lower allergy risks
- + Anti-static properties
- + Repels wet substances
- + Rolled cuff helps keep debris out
- + Ambidextrous

POLYMER Nitrile Low-modulus	THICKNESS 5 mil
LINER Disposable	LENGTH 12 inches
GRIP Bisque fingertips	COLOR Off white

PACKAGING : XS, S, M, L, XL
10 polybags per case

6110PF [NITRILE]

Biodegradable, powder free, 4-mil, 9.5-inch, disposable low-modulus nitrile glove with Eco Best Technology® (EBT).

KEY BENEFITS

- + Performs same as non-EBT nitrile disposable gloves
- + 100% biodegradable
- + Decreased risk of allergies
- + High performance of protection
- + Second-skin fit & feel

POLYMER Nitrile w/ EBT Low-modulus	THICKNESS 4 mil
LINER Disposable	LENGTH 9.5 inches
GRIP Bisque fingertips	COLOR Green

PACKAGING : XS, S, M, L, XL, XXL
100 gloves per dispenser
10 dispensers per case

6112PF [NITRILE]

Biodegradable, powder free, 4-mil, 9.5-inch, disposable low-modulus nitrile glove with Eco Best Technology® (EBT).

KEY BENEFITS

- + Performs same as non-EBT nitrile disposable gloves
- + 100% biodegradable
- + Decreased risk of allergies
- + High performance of protection
- + Second-skin fit & feel

POLYMER Nitrile w/ EBT Low-modulus	THICKNESS 4 mil
LINER Disposable	LENGTH 9.5 inches
GRIP Smooth	COLOR Black

PACKAGING : XS, S, M, L, XL, XXL
100 gloves per dispenser
10 dispensers per case

8500PF [NITRILE]

Competitively-priced 8-mil, powder-free, nitrile glove, the SHOWA 8500PF is designed for the consumer in mind.

KEY BENEFITS

- + Latex-free
- + Competitively-priced
- + Retains tactility
- + Rolled cuff helps keep debris out

POLYMER Nitrile	THICKNESS 8 mil
LINER Disposable	LENGTH 9.5 inches
GRIP Smooth	COLOR Blue

PACKAGING : S, M, L, XL
50 gloves per dispenser
20 dispensers per case

N-DEX®
8005/PF [NITRILE]

8-mil, 9.5-inch, low modulus nitrile disposable glove. Available lightly powdered (8005) or powder-free (8005PF).

KEY BENEFITS

- + Chemical splash protection
- + Oil protection
- + Second-skin fit & feel
- + Retains tactile feeling
- + Lower allergy risk
- + Ambidextrous

POLYMER Nitrile Low-modulus	THICKNESS 8 mil
LINER Disposable	LENGTH 9.5 inches
GRIP Smooth	COLOR Light blue

PACKAGING : S, M, L, XL
50 gloves per dispenser
20 dispensers per case

N-DEX®
9700PF [NITRILE]

Powder-free, **6-mil, 11-inch**, disposable low-modulus nitrile glove.
Accelerator-free formulation.

KEY BENEFITS

- + Free from common accelerators found in nitrile gloves
- + Even lower risk of allergies
- + Thicker barrier protection
- + Wrists are well protected
- + Hides dirt and grime
- + Second-skin fit & feel
- + Rolled cuff helps keep debris out

POLYMER Nitrile Low-modulus	THICKNESS 6 mil
LINER Disposable	LENGTH 11 inches
GRIP Bisque fingertips	COLOR Black

PACKAGING : S, M, L, XL
50 gloves per dispenser
20 dispensers per case

Chemical Resistant Gloves

There are 3 key components for choosing the right chemical glove for your application:

- Understanding the chemical properties
- Identifying potential hazards
- Determining contact duration

Supported gloves are made by dipping a woven or knitted liner into the compound. The liner provides extra strength and insulation.

Unsupported gloves are made by dipping bare hand molds into the glove compound. These gloves are superior in applications where tactile sensitivity and dexterity are needed.

Nitrile is a perfect solution for oils, petroleum, and certain acids and caustics. It is sometimes also known as synthetic rubber. Additional abrasion resistance offers a non-slip grip and makes nitrile unsupported gloves a good choice for general purpose use.

Neoprene has the basic chemical resistance qualities as nitrile but with less abrasion resistance. Both nitrile and neoprene are available in unsupported and coated (palm or fully coated) depending on the application. Nitrile and neoprene offer similar basic protection.

Coated Supported Gloves

Nitrile Coated

Neoprene Coated

Nitrile Coated - Cut & Sewn

Vinyl Coated

Vinyl Laminated

Vinyl Impregnated

Rubber Coated/PVC Coated

Liquid Proof Unsupported Gloves

Unsupported Nitrile

Unsupported Neoprene

Unsupported Latex

Unsupported Rubber

Rubber (Latex) coated gloves resist bases, acids, alcohols, and diluted aqueous solutions of most types of chemicals. Rubber coated gloves add superior grip and cut resistance. Rubber coated gloves are a great choice for handling ceramic, glass and some sharp edged products.

Polyvinyl Chloride (PVC) is the best choice for cost effectiveness when protecting against chemicals, oils, and grease. This compound is the perfect choice for hand protection against petrochemicals, refining, and construction sites. PVC is available in laminated (PVC sealed to a base liner such as knit lining) or impregnated (PVC blends through a cotton or jersey liner). PVC is an excellent choice for chemical and abrasion resistance where moisture is not a concern.

SYNTHETIC RUBBERS

Nitrile and Neoprene are synthetic rubbers that provide excellent resistance to abrasion & puncture. They provide protection against a wide range of solvents, oils, greases, acids, caustics, and many petroleum products.

Neoprene and Nitrile gloves normally function well in temperatures ranging from 25°F (-4°C) to 300°F (149°C).

- 12" length
- Flock lined
- Sizes: S-XL

Our gloves are manufactured in ISO-9001 approved facilities with state of the art equipment. These measures ensure consistently high quality gloves with every shipment.

Disposable Gloves

Latex (Rubber) gloves are the choice for the industry when optimal barrier protection is a requirement. Latex is also considered to provide the greatest fit of any disposable glove. These gloves are available both in powdered and powder-free, medical and industrial grade. Industrial grade latex gloves are made from component materials which meet requirements for food contact and handling. Our medical grade latex gloves comply with FDA regulations.

Nitrile gloves are manufactured using synthetic polymers and are more puncture resistant than natural rubber. Offering superior resistance to punctures and abrasions, they are a perfect choice for protection from a variety of chemicals. Easily donned, this product is the perfect choice for your disposable needs when latex allergens are a concern. Industrial grade nitrile gloves are made from component materials which meet requirements for food contact and handling. Our medical grade nitrile gloves comply with FDA regulations.

Chloroprene (CR) gloves are a proprietary formulation of completely synthetic polymers, closely related to neoprene. This unique compound combines the barrier performance of a synthetic glove with the superior comfort found only in natural latex. Chloroprene gloves are ideal against abrasive and corrosive chemicals, grease, contaminated soil and composites, and sharp edges from plastic and other materials. These gloves are popular for food handling due to the extra comfort and exceptional tactile sensitivity. Industrial grade chloroprene gloves are made from component materials which meet requirements for food contact and handling.

DuraSkin® Industrial Grade Gloves

- Disposable Latex
- Disposable Nitrile
- Disposable Vinyl
- Disposable Chloroprene
- Disposable Polyethylene

BioSkin® Medical Grade Gloves

- Medical Examination Latex
- Medical Examination Nitrile
- Medical Examination Vinyl

Vinyl gloves which are derived from synthetic PVC resins offer a cost-effective alternative to latex. They are ideal for food preparation, light duty cleaning and general maintenance. Like latex and nitrile, vinyl gloves are available in powdered and powder-free versions. Industrial grade vinyl gloves are made from component materials which meet requirements for food contact and handling. Our medical grade vinyl gloves comply with FDA regulations.

Polyethylene gloves serve as a cost-effective solution for creating a barrier between hands and product. Mainly used in food service environments and parts handling, polyethylene disposable gloves are ambidextrous as well as have an embossed grip.

Complying with FDA and USDA regulations, our vast selection is suitable for every application and budget.

DAYBREAKER[®]

Impact Gloves

Daybreaker[®] gloves were specially engineered to reduce the possibility of impact. TPR (thermoplastic rubber) tread designs are reinforced across back of hand to protect against unexpected impact or abrasion. The anatomically shaped abrasion resistant palm paddings reduce hand fatigue. These performance driven heavy duty work gloves deliver 360° hand protection. Equip yourself with these multi-purpose, comfort-flex gloves that take on the most demanding environments.

Glove Features

1

1. Proprietary high density polyurethane palm coating (HDPU) provides optimal abrasion, breathability and comfort.

2

2. Abrasion resistant synthetic based rubber (SBR) pads enhance grip comfort and increase palm protection.

3

3. Thermoplastic rubber (TPR) die cuts on fingers and fingertips provide ergonomic impact protection.

4

4. Hi-visibility premium cotton cord absorbs liquid in slick or oily conditions.

5

5. Reflective material on neoprene for a higher level of visibility.

6

6. Thumb crotch prevents blow outs and provides additional protection.

Leather Gloves

Leather hand protection is available in grain and split cowhide, pig, goat or deerskin leathers. While cowhide is the most popular in the industry, pigskin has higher abrasion resistance, great air circulation qualities and retains its flexibility when wet. Goatskin has an excellent abrasion resistance and high tensile strength; its high lanolin content makes this leather exceptionally soft. Deerskin has the highest density strength of all leathers that offers dexterity as well as softness.

Our selection of leather hand protection offers a variety of styles:

Driver gloves include slip-on configuration for ease of donning and available with a straight, wing or keystone thumb.

Leather palm gloves range in full featured safety cuff, knit wrist, or gauntlet cuff for more protection.

Double palm gloves feature reinforced palm area to provide added protection and wear. Kevlar® sewn thread is used on certain styles for additional strength and abrasion resistance on the seams. For additional air circulation, our cotton canvas on the back of leather palm gloves is another popular style.

Lined gloves with jersey, piled or 3M™ Thinsulate™ can be used if the job requires insulation for additional protection from cold weather.

When the tasks require leather hand protection, we have many styles to choose from that would satisfy both your needs as well as your budget.

LEATHER COMPARISON

- Cow:** By far, the most commonly used leather in the safety industry due to good abrasion resistance and attractive appearance.
- Pig:** Offers the best abrasion resistance and breathability. The naturally high lanolin content in pigskin allows it to return to softness, even after repeated contact with water.
- Goat:** Excellent abrasion resistance with strong tensile strength. High lanolin content makes the leather soft.
- Deer:** Highest tensile strength of all leathers. Excellent dexterity and softness.

LINING COMPARISON

Fleece: The most commonly used glove liner, made of napped brushed cotton.

3M™ Thinsulate™: The warmest thin insulation on the market, Thinsulate™ has about 1.5 times more warmth than down feather lining, and absorbs less than 1% of its own weight in water which allows it to retain its insulating ability even in damp conditions.

Pile: This synthetic wool is popular because of its relatively low cost and realistic similarity to wool.

Foam: With the comfort of a fleece layer and an additional 2 layers of polyester and polyurethane foam, this lining offers the most value for warmth insulation.

CUTS OF SPLIT LEATHER

Side Split:

The portion of the hide that covers the rib area of the animal. This premium leather is more uniform and offers the greatest protection because there are fewer scars with weaker fibers.

Shoulder Split:

The portion of the hide on the neck and shoulder of the animal. More economical than side split, this leather has more visible texture differences and less fiber density. We offer the widest range of shoulder quality split leather in the industry. Different grades of shoulder leather have been carefully selected to construct a glove that fits your budget.

Belly Split:

From the belly portion of the animal, this leather is generally used for economy grade gloves.

GENERAL CUFF CONSTRUCTION & MATERIAL

Leather:

Provides durability & longer wear.

Rubberized:

Rubber material laminated in between two fabric layers.

Plasticized:

Waterproof polyethylene adhesive laminated between pieces of fabric.

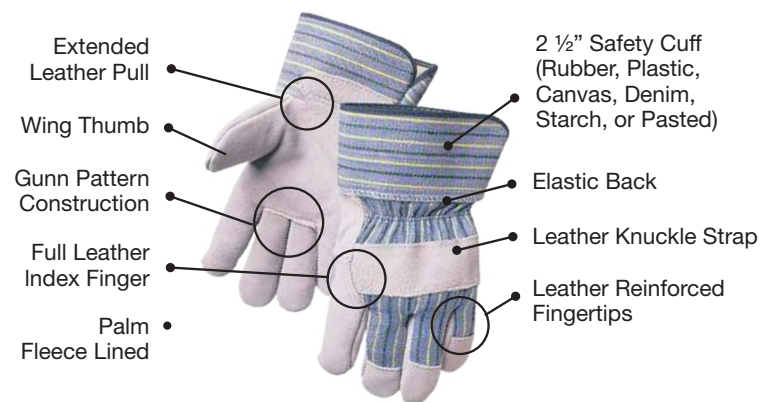

Denim:

Economical single-ply fabric material.

Starched:

Two layers of fabric laminated together, then starched.

FEATURES OF A FULL FEATURE LEATHER PALM

LEATHER PALM CUFF CONSTRUCTION

2 1/2" Safety Cuff: The most common cuff design, protects the wrist area. Slides on and off easily.

4 1/2" Gauntlet Cuff: This longer cuff offers the same protection as a Safety Cuff, with increased protection to the forearm.

Knit Wrist: This design holds the glove in place while preventing debris from entering.

Textile / String Knit Work Gloves

Textile/string knit work gloves are commonly used in different industries, ranging from light to heavy duty applications. These gloves are made from different materials including natural cotton fibers, synthetics such as cotton/poly TC blend, nylon or polyester. Assembled through cut and sewn or seamless knits, these gloves retain functionality while offering custom fitting for any general purpose applications.

Choose from a variety of different materials, product constructions, and coatings to fit your application:

Cotton canvas gloves offer an economical, comfortable and durable choice for industrial applications. Styles are available in clute pattern to prevent seams from splitting, knit wrist to provide a snug fit, band top for additional comfort, and gauntlet cuff for extended protection. PVC dots are cured on these gloves for additional grip, abrasion resistance, and durability.

String knit gloves are extremely soft, providing excellent dexterity and are ideal for glove liners. PVC dots are cured on these gloves for additional grip, abrasion resistance, and durability. These gloves are available in hand specific and reversible styles.

Inspection gloves are made from 100% cotton, polyester cotton blends or nylon materials. These are used to protect small parts or keep the product clean from contamination. Selections of lisle or nylon inspection gloves are available in light, medium, or heavy weight.

Hot mill gloves are designed for heat protection. Constructed with multiple layers of cotton or non-woven materials provide superior comfort. Available in various weights with standard features, these gloves are an excellent choice for additional heat protection.

Cotton chore gloves provide abrasion protection for general purpose applications. Available in various weights, these gloves are perfect for insulation and heavy duty applications.

Terry gloves are used in light to moderate heat applications. Loop-out terry gloves have more intermittent heat dissipation while loop-in knits are a safeguard from snags. Terry gloves are available in various weights and colors to best suit your application.

Gardening gloves are perfect for home gardeners, professional landscapers and are a great general purpose glove.

Hi-Viz Protective Apparel

HiVizGard™ has a broad selection of hi-viz apparel. These garments are to alert drivers or other vehicle operators of a worker's presence, especially in low light and dark conditions. All of our products are engineered and manufactured by certified ISO 9002-2000 facilities. Without compromising your safety, we are committed to designing with comfort, style, and functionality in mind. Gear up with HiVizGard™ as your hi-viz protective apparel solution.

Customized printing is available. Contact your customer service representative for more details.

HI-VIZ
APPAREL

American ANSI/ISEA 107-2015 Revision | High Visibility Standards

ANSI/ISEA 107-2015 The standard will now combine the ANSI/ISEA 107 (roadway) and the ANSI/ISEA 207 (public safety) into one. This revision is primarily a change in how garments are categorized and labelled and not about protection.

1 Current ANSI/ISEA 107-2010 and ANSI/ISEA 207-2011 garments are still acceptable to use - there are no requirements made to change any existing High Visibility garments. The new standard will help to improve High Visibility by offering more clarification and enhancements for the future.

2 New Garment HVSA Types added to Class Definitions

New HVSA Types

- Type O = Off Road - Non Roadway (Includes Class 1)
- Type R = Roadway (Includes Class 2 and Class 3)
- Type P = Public Safety (Includes Class 2 and Class 3)
(ANSI 207 merged)

New HVSA Class Definitions

- Type O - Class 10
- Type R - Class 2R and Class 3R
- Type P - Class 2P and Class 3P
- Type Supplemental - Class E

3 Smallest Size Garments Type R - Smaller sized workers wearing oversized garments can be a safety hazard. The standard now allows for less background material required for the “smallest” size for both Roadway type Classes.

Smallest size garment may have less background material

- Class 2R = smallest size decreases from 775 sq. inches to 540 sq. inches
- Class 3R = smallest size decreases from 1,240 sq. inches to 1,000 sq. inches

4 Non FR labeling Now Required - The label will now read *“This garment is non flame resistant as defined by ANSI/ISEA 107-2015 Section 10.5”* Garments not tested to meet flame resistant performance criteria of standards listed in ANSI are required to have Non FR labelling.

5 Balanced Design including Logo Allowances - the front and back of garments are now required to have no less than 40% of the minimum required background material and reflective. Logos of non-ANSI compliant materials will not cover more than 72 sq. inches of the background material, no more than 22 sq. inches of reflective material, and will not make a break in the Horizontal reflective greater than 1.97 inches.

As a leader in the Personal Protective Equipment industry, Liberty Glove and Safety will continue to serve its customers by providing high quality, high visibility garments by incorporating a running change that is ANSI/ISEA 107-2015 compliant. As the PPE industry changes to adopt these new standards, we will continue to offer the right protection for the job. Please contact your Liberty Glove & Safety account manager if you have any additional questions at (800) 327-8333.

Protective Apparel

APA® AllGard Protective Apparel offers disposable protective garments from economical to proprietary materials which provide excellent barrier protection, comfort, and breathability. It is designed to deliver confidence without compromising safety.

PlusGard® is exclusively developed by our research and development team to promote excellent breathability, durable abrasion resistance, and high-level protection against blood borne pathogen penetration.

PureGard™ is an economical alternative for excellent splash protection against light non-hazardous liquid.

PermaGard™ is a general purpose protective clothing that can be used in any non-hazardous application to protect against dirt, light liquid splashes, and particles.

ProGard™ is made with a durable material that provides non-hazardous particulate protection while offering excellent breathability.

PolyGard™ is the most economical solution for general applications.

Customized printing is available. Contact your customer service representative for more details.

AllGard Protective Apparel Features

1. Raglan back construction for greater range of motion

2. Storm-flap over zipper front closure prevents liquid splashes

3. Two-way zipper allows convenient access to interior clothing

4. Elastic back waist for comfort and fit

5. Elastic wrists keep out particulates

6. Reinforced overlock stitching at crotch reinforcement provides fewer blowouts

7. Elastic ankles provide snug fit over shoes

BACK CONSTRUCTION

RAGLAN BACK CONSTRUCTION

Creates stronger seams for a wider range of arm movement, which has less exposure than standard sewing construction

CAPE BACK

For quick moisture discharge

PP SPUNBOND BACK

For continuous breathable comfort

STITCHING CONSTRUCTION

Stitching: each inch of seam has 7 stitches that give the suit added strength at the seams and better particulate barrier protection.

Serged seams: four threads are interlocked to form a strong seam. This is the standard method to attach 2 raw edges together.

Bound seams: a serged seam with an added outer binding for strength and extra splash barrier.

SIZING CHART

Based on ANSI 101-2002 Sizing Standards

WARNING:

There are certain applications, chemicals, and environments which AllGard™ Protective Apparel are not suitable for. It is always the responsibility of the user to determine risk, review and understand available data to assess the appropriate use of the apparel for a particular application, and perform “on-site” testing before putting the product to actual use. The manufacturer, distributor, and sales representative do not accept responsibility for the user’s choice of product against any particular risk.

CAUTION:

These products are not intended for fire protection. Avoid open flames, sparks, and intense heat.

WARRANTY / LIMITATION OF DAMAGES:

Since the condition of use is beyond the scope and control of AllGard™ Protective Apparel Company, APA makes no further warranties of any kind, expressed or implied, oral or written, including, without limitations, no warranties of fitness for a particular purpose. The sole and exclusive remedy for users and purchasers for any and all claims, injuries, losses, or damages arising from APA Apparel and accessories found to contain a manufacturing defect upon inspection by APA shall not exceed the purchase price of the product. In addition, in no event shall APA be liable for any special, incidental, consequential, indirect, or punitive damages arising from breach of contract, tort, warranty, manufacturing defect, or any other cause that exceeds the purchase price of the product. Claims must be received by APA within 90 days of the date the apparel or accessory was shipped to the user or purchaser to be considered for remedy. Warranty, at APA’s sole discretion, may be in the form of replacement, refund, or repair of the product.

PlusGard™, PermaGard™, ProGard™, PureGard™, and PolyGard™ are trademarks of AllGard™ Protective Apparel.

Heavy Chemical Exposure

New Packaging

Our new packaging is labeled with the same stop sign shapes as the garments.

We've simplified our product identification system by replacing the original product names with an easy-to-follow numeric system. The higher the number, the greater the protection—it's that simple.

For example, Tychem® QC is now Tychem® 2000.

Tyvek® is now Tyvek® 400.

Original	New	
 Tychem® Reflector®	 Tychem® 10000 FR	Heavy Chemical Exposure
 Tychem® TK	 Tychem® 10000	
 Tychem® Responder® CSM	 Tychem® RESPONDER® CSM	
 Tychem® BR	 Tychem® 9000	
 Tychem® ThermoPro	 Tychem® 6000 FR

The number of garments per case.

00

Options

Abbreviations such as
TV Trade Agreement Act compliant
VP Vend packed

Not all option codes are available for all products; refer to catalog descriptions for details.

*Not all sizes are available in all styles.

Stock Items versus Make to Order

For ProShield® and Tyvek® garments, sizes Medium to 4X are identified as stock items. Sizes Small and 5X and above are identified as Make to Order. Certain accessory items are also identified as Make to Order.

Most garments in the Chemical/HazMat line (Tychem® 2000, Tychem® 4000, Tychem® 6000, Tychem® 9000, Tychem® RESPONDER® CSM and Tychem® 10000) are identified as Make to Order. A small grouping is identified as stock items, following the same size guidelines as indicated above.

Stock/Make to Order designations are based on sales volume and production efficiencies. Therefore, designations are subject to change without notice.

PROTECTIVE APPAREL

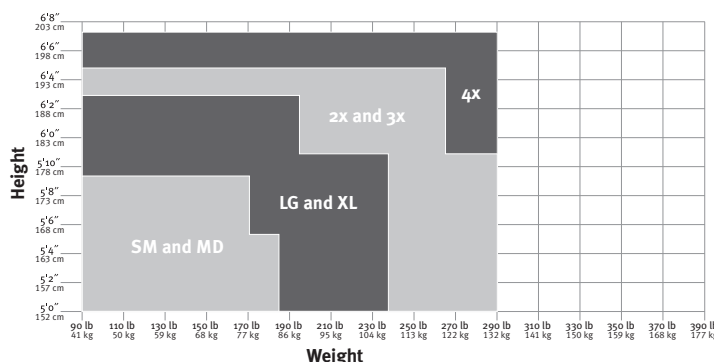

Sizing Charts

Sizing for protective garments

Sizing for fully encapsulated suits

This chart is based on individuals wearing SCBA, safety helmet and standard work clothing. Fit varies with individual body shape.

Choosing a Garment

Before searching for an appropriate chemical protective garment, you should assess the nature of the hazard and the working environment. Different factors including concentration, temperature and pressure must be matched to the garment's fabric, design and seam construction.

Fabric

No matter what the brand or trade name, almost all limited-use protective apparel products can be classified into one of a few general fabric technologies. It is important to understand the performance attributes of the fabric being used for a given application. Why? Not all fabrics used in chemical protective garments are the same. From exclusive DuPont technologies such as DuPont™ Tychem® and DuPont™ Tyvek® to SMS and microporous film fabrics, DuPont offers a variety of fabrics with different levels of comfort, durability, breathability and protection to meet your specific needs.

In order to select the appropriate protective garment, it is crucial to know how well the fabric used in the garment provides a barrier to specific hazardous materials. Testing for chemical protective fabrics can be divided into two primary categories:

- 1) penetration testing—appropriate for particle hazards
 - 2) permeation testing—appropriate for liquid and gaseous hazards
- Penetration occurs when there is bulk movement of a material through a pore, hole, gap or defect in the fabric and is the proper method to evaluate particle barrier. Permeation, on the other hand, occurs when there is movement of the material through the barrier fabric on a molecular level. It is possible for a liquid or vapor to permeate through a fabric even when there is no observed opening in the fabric. Permeation testing is a more sensitive and representative way of characterizing the interaction of liquids and gases with the barrier fabric. Permeation testing is critical for fabrics that are exposed to hazardous liquids, vapors or gases.

Fabric technologies typically used in protective garments.

All images are magnified.

Exclusive DuPont Technologies

DuPont™ Tychem® Chemical barrier fabrics specifically engineered for protection over a range of hazards.

DuPont™ Tyvek® Tyvek® is 100% high-density polyethylene fibers entangled into a protective material—with no fillers or thin films to wear away. Made only by DuPont, it offers superior protection and durability.

Microporous Films (SF or MF) Bi-laminate with a thin microporous film layer on a spunbonded polypropylene nonwoven, these fabrics offer limited durability—barrier protection is lost when the film layer is abraded.

Spunbond-Meltblown-Spunbond (SMS) SMS fabrics rely on the meltblown polypropylene layer in the middle of the open tri-laminate polypropylene structure to act as the main filter for particles. They have limited durability and barrier performance, especially against liquids.

Spunbonded Polypropylene (SBPP) With their highly open structure, SBPP fabrics offer negligible barrier protection.

Choosing a Garment

Seam construction

Seams are a critical component of the overall barrier protection provided by a chemical protective garment. It is vital to select the appropriate seam configuration for your application needs and to know that the garment will be constructed with strong, tight seams. One loose thread or gap and the barrier between you and your environment unravels—leaving you vulnerable.

Serged or Sewn*

A seam produced when multiple threads are interlocked around the raw edges of two pieces of material for a strong, stress-resistant seam.

Bound*

Tightly sewn with a reinforced outer binding to increase seam strength and barrier. For potential misting exposure to non-hazardous liquids or particle penetration through the seam.

Taped

Both sewn and taped to provide strong chemical resistance against heavy liquid splashes and tough seam stress. A sewn seam is covered with a strip of compatible material by heat-sealing.

Double Taped

Sewn, then taped on the inside and the outside of the seam for a very strong chemical- and stress-resistant seam.

*Serged and/or bound seams are degraded by some hazardous liquid chemicals, such as strong acids, and should not be worn when these chemicals are present.

High Visibility

Low Visibility

High visibility can be either a help or a hindrance for emergency responders. For example, in hazardous situations, it is critical that emergency responders can be easily seen. In addition, hazardous material emergencies often occur in poorly lit environments—thus the need for high visibility.

The high-visibility colors chosen for DuPont™ Tychem® fabrics were based on extensive research. For example, the human eye is more sensitive to the lime yellow of Tychem® 10000 and the safety yellow color of Tychem® 9000 and Tychem® 2000 fabrics. On the other hand, there are instances when being visible is dangerous. When discretion is preferred—or required—special low-visibility fabrics, such as Tychem® 5000, are harder to see and blend into a variety of environments.

Garment style

DuPont offers a wide variety of garment styles—from hoods and shoe covers to aprons, coveralls and fully encapsulated suits. Fully encapsulated suits are available with front or rear entry, with a flat back for airline accommodation or an expanded back for SCBA accommodation.

Hoods

Standard

Respirator Fit

In addition to our standard hood design, many of our garments offer a respirator fit hood. These hoods are designed with a longer zipper for complete coverage of the neck area.

Faceshields

Standard

EX (extra-wide)

In addition to the standard faceshield, DuPont has several garment styles that offer a greater field of vision, enabling the wearer to see more of what they are dealing with, reducing missteps and allowing more natural movement and better eye contact.

The EX (extra-wide) faceshield options on Tychem® 10000 and Tychem® 9000 Level A garments feature a wrap-around design that provides ample room for a mask-mounted regulator. This faceshield is wider and longer, providing expanded peripheral and vertical viewing.

SM-6X

Provides a barrier against a range of non-hazardous aerosols, light liquid splash and dry particles

Microporous film laminated to a nonwoven fabric

Industries and applications include janitorial, sanitation, general industrial maintenance

Lighter weight and roomy design make for greater comfort and mobility

ProShield® 50 is white

¹ Respirator fit hoods are designed with a longer zipper, extending to the chin for complete coverage of the neck area. Standard hoods only extend to the neck. See page 7 for photos.

Bound and sewn seams and closures have less barrier than fabric. Serged and/or bound seams are degraded by some hazardous liquid chemicals, such as strong acids, and should not be worn when these chemicals are present.

Note: Not all sizes available in all styles.

WARNING: ProShield® 50 should not be used around heat, flames, sparks or in potentially flammable or explosive environments. Garments made of ProShield® 50 fabric should have slip-resistant or anti-slip materials on the outer surface of boots, shoe covers, or other garment surfaces in conditions where slipping could occur.

one size fits most

Skid-resistant material for shoe/boot covers to help prevent slipping

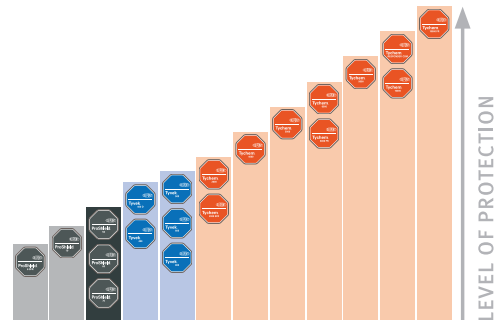

Provides non-hazardous liquid splash protection

ProShield® 70 is gray

Bound and sewn seams and closures have less barrier than fabric.

Serged and/or bound seams are degraded by some hazardous liquid chemicals, such as strong acids, and should not be worn when these chemicals are present.

WARNING: ProShield® 70 should not be used around heat, flames, sparks or in potentially flammable or explosive environments.

DuPont™ Tyvek® 400

Original Name: Tyvek®

PROTECTIVE APPAREL

TY127S

An ideal balance of protection, durability and comfort

Comfort fit design allows for a greater range of motion and fewer blowouts

Breathable inherent barrier protection against hazardous dry particles, aerosols and non-hazardous light liquid splash

Excellent abrasion resistance; protects against hazardous particles down to one micron in size

When used with other PPE, can help reduce risk of cross-contamination in pandemic response activities

One garment for many applications:

- General maintenance/operations
- Microcrystalline silica
- Lead abatement
- Environmental cleanup
- Agriculture
- Asbestos abatement
- Food processing
- Mold remediation
- Spray painting
- Crime scene investigation
- Wind turbine manufacturing

PROTECTIVE APPAREL

DuPont™ Tyvek® 400D

Original Name: Tyvek® Dual

Front with hood

Back

TD127S

Tyvek® 400 D garments provide an ideal balance of comfort, durability and protection for workers

Comfort fit design helps enable a greater range of movement while stretching and bending

Designed for very specific applications where demanding comfort requirements are combined with limited protective requirements for frontal exposures

Well suited for workers who are involved in a variety of strenuous activities that can lead to heat stress in applications that include:

- Wind turbine manufacturing
- Composites manufacturing
- Boat manufacturing
- Remediation
- Utilities
- Maintenance
- Glass manufacturing

PROTECTIVE APPAREL

DuPont™ Tyvek® 400 fabric on the front and hood

Tyvek® fabric is composed of flashspun high-density polyethylene, which creates a unique nonwoven material available only from DuPont

Tyvek® 400 fabric provides an ideal balance of protection, durability and comfort compared to any limited-use fabric technology

Tyvek® 400 fabric's durability delivers a consistently better barrier, even after wear and abrasion

Tyvek® 400 is white

DuPont™ ProShield® 10 fabric on the back

ProShield® 10 fabric has been optimized for comfort, softness and breathability

ProShield® 10 fabric is designed for nonhazardous dry particle and light liquid splash applications

ProShield® 10 is made from a polypropylene spunbond-meltblownspunbond (SMS) fabric

ProShield® 10 is blue

Provides triple hazard protection from chemicals, flash fire and electric arc, combining the trusted chemical protection of DuPont™ Tychem® with the flame and arc flash protection of DuPont™ Nomex® into a single garment

Tychem® 6000 FR 198T/199T meet the requirements of NFPA 1992 Standard on Liquid-Splash Protective Ensembles and Clothing for Hazardous Materials Emergencies and NFPA 2112, Standard on Flame-Resistant Garments for Protection of Industrial Personnel Against Flash Fire

Tychem® 6000 FR 198T/199T exceed the Hazard Risk Category 2 requirement of 8 cal/cm² outlined in NFPA 70E, Standard for Electrical Safety in the Workplace

Constructed for heavy use, yet lightweight and easy to wear

Tychem® 6000 FR provides at least 30 minutes of protection against >180 chemical challenges

Tychem® 6000 FR has an arc rating of 15 cal/cm² Ebt

Tychem® 6000 FR is available in orange for high visibility and gray for discretionary purposes

Only BN option codes are Berry Amendment compliant.

Please note that Tychem® fabrics have different permeation performance. Please check SafeSPECTM on our website for permeation data that meets your specific needs.

Stock/Made to Order designations are based on sales volume and production efficiencies. Therefore, designations are subject to change without notice.

¹ These Tychem® 6000 FR garments have attached socks made of the garment material. These attached socks must be worn inside protective outer footwear and are not suitable as outer footwear. These attached socks do not have adequate durability or slip resistance to be worn as the outer foot covering.

² Respirator fit hoods are designed with a longer zipper, extending to the chin for complete coverage of the neck area. Standard hoods only extend to the neck. See page 7 for photos.

Seams and closures have less barrier than fabric.

Note: Not all sizes available in all styles.

WARNING: Tychem® should not be used around heat, flames, sparks or in potentially flammable or explosive environments. Only Tychem® 6000 FR and Tychem® 10000 FR garments are designed and tested to help reduce injury during escape from a flash fire. Users of Tychem® 6000 FR and Tychem® 10000 FR garments should not knowingly enter an explosive environment. Consult the Tychem® user manual, located on our website, for instructions on proper use, care and maintenance of your Tychem® garments.

WORKRITE UNIFORM CO.

EST. 1973

PROTECTIVE
APPAREL

 **Workrite[®]FR**

FR

Walls[®]FR

Workrite[®] Uniform Company stands alone in having spent the last 40-plus years working of trusted experience in flame-resistant (FR) clothing, backed by strong partnerships with top fabric manufacturers. We have a dedicated North American sales force and experienced customer service team to meet all your FR needs. Williamson-Dickie Manufacturing Company is the number-one global workwear brand, and as an affiliate, Workrite[®] Uniform remains a leader in FR workwear worldwide. Today, Workrite[®] Uniform offers three top-quality FR brands—Workrite[®] FR, Dickies FR and Walls FR.

APPAREL SIZES

Workrite Uniform takes great pride not only in the superb quality of our garments, but in the wide range of sizes we offer. Please refer to the following information to help you select the correct sizes. Sizes outside of the stock size range as well as custom garments are available, subject to surcharges. If you have any questions, please visit workritefr.com.

CHEST:

Measurement should be taken around the fullest part of the chest with arms down, just under the arms and across the shoulder blades.

SLEEVE:

With elbow bent, measure from center of neck (back side) to elbow and over to wrist.

WAIST:

Measure around waist (not pulling tightly) at the height you prefer to wear the waistband.

INSEAM:

Take a pair of pants that fit you well and measure from the crotch to the bottom of the leg.

WORKRITE UNIFORM STYLE NUMBERS

It's easy to determine a Workrite Uniform style number for ordering or information purposes. Each style number consists of a garment style code, fabric type, fabric weight and color. For example, the style number for a **Navy 4.5-ounce Industrial Coverall made of Nomex® IIIA** is...

CHEST:

Measurement should be taken around the fullest part of the chest with arms down, just under the arms and across the shoulder blades.

SLEEVE:

With elbow bent, measure from center of neck (back side) to elbow and over to wrist.

WAIST:

Measure around waist (not pulling tightly) at the height you prefer to wear the waistband.

INSEAM:

Take a pair of pants that fit you well and measure from the crotch to the bottom of the leg.

Bar-Tread Outsole

DuraWear™ boots are available with steel toes, which give the user extra protection from foot injuries.

Hearing Protection

Hearing protection is required in work environments that are exposed to noise levels equal or greater than 85 decibels (dB) averaged over an eight hour period. It is critical in choosing the appropriate hearing protection devices based on performance, selection, care and use.

Single-Use Ear Plugs are easy-to-use and ranging in different attenuation ratings. These disposable foam ear plugs provide the right fit for every user. Products are available in corded or uncorded styles.

Multiple-Use Ear Plugs have a unique three-flange design for a better seal in the ear canal providing protection. The firm stem facilitate as easy insertion and removal and increased comfort for long-term wear. Products are available in corded or uncorded styles.

Detectable Ear Plugs have a small piece of metal attached to the ear plugs itself or built into the cord. The purpose is when the product is screened for final inspection the screeners are able to locate it and avoid contamination. Products are available in single-use and multiple-use styles.

Banded Ear Plugs consist of two ear plugs held over the ends of the ear canal by a rigid headband. These types of ear plugs create less bulk for easy don and doff.

Ear Muffs are made from sound-attenuating materials and padded ear cups for a secure fit without compromising comfort.

Eyewear Protection

iNOX™ Testing and Technology

Safety Standards

optical Tests

- Optical quality – free of bubbles, waves, and visible defects.
- Luminous transmission – clear lenses keep a minimum transmission of 85%.
- Physical requirements – free from sharp edges, defects that is likely to cause discomfort or injury.
- Minimum coverage area – appropriate areas of the user's eyes and face are protected efficiently.

High Impact Tests

The “drop ball” test determines the basic impact safety classification for lenses. A one-inch diameter steel ball is dropped onto the lens from a height of 50 inches.

High impact testing, a high velocity test is performed by shooting a quarter-inch diameter steel ball at the lens at a speed of 150 feet per second for spectacles and 250 feet per second for goggles.

All iNOX™ safety glasses comply with the highest industry safety standards and carries “Z87” or “Z87+” marking on the lens(es) and frame.

Construction Features

TPR Technology

iNOX™ utilizes special TPR (thermo plastic rubber) to prevent slippage from moisture and perspiration. This technology is used in the temple tips and nose pieces to keep glasses on the wearer's face.

Frame Technology

- Frames consist of flexible and durable nylon materials
- Wrap around frames prevent side shield distortion
- Straight temples rest comfortably on head without pinching

Lens Technology

- All iNOX™ lenses filter 99.9% of UVA/UVB rays
- Polycarbonate lenses comply with:
 1. ANSI Z87.1-2015
 2. Polarized lenses
 3. Military MIL-PRF-31013 clause 3.5.1.1

- Anti-fog & scratch resistant lenses

iNOX™ Eyewear Solutions

Wide Fit

Wider frames offered for different head sizes

Magnifiers

Available in magnification 1.0, 1.5, 2.0, 2.5, and 3.0

Foam Gaskets

Provides a comfortable seal to keep out particles

Adjustable Temples

Ratchet inclination temples for a custom fit

Anti-Fog Options

Anti-fog coating on polycarbonate lenses

Polarized Lenses

Polarization for improved glare reduction outdoors

Interchangeable Lenses

Lenses can be changed for different conditions

Infrared (IR) Lenses

Green filters protect from UV rays and flash burns

UV Filter | Lens Color Guide

Ultraviolet Filtration

All iNOX™ eyewear lenses provide 99.9% protection from UVA/UVB rays.

A. UVA (320-400nm) - UVA rays remain at a relatively stable intensity all year round. Exposure to high levels of this light without the proper sunglasses protection may cause damage to your central vision.

B. UVB (290-320nm) - UVB are considered the sun's burning rays, mostly associated with sunburns. Exposure to high levels of this light without the proper sunglasses protection may cause permanent damage to the cornea and lens.

Lens Color Guide

Understanding the functionality of task-specific lenses and determines what color or tint may be best for your application and environment.

Clear

Provides excellent optics for general indoor applications where impact protection is required.

Gray

For outdoor applications where light and glare can cause eyestrain and fatigue.

Indoor/Outdoor

A clear lens with a slight mirror coating serves the same purpose as the gray lens, yet allows more visible light through the lens for indoor /outdoor use. Reduces glare from artificial light.

Infrared

Green filters protect from UV rays & flash burns.

Blue, Red, Orange, Brown, Gold and Silver Mirror

Use outdoors where sunlight and glare cause eyestrain and fatigue. Mirror coating reflects light, reducing the amount of light that passes through the lens.

Brown, Mocha, Bronze and Orange

For outdoor applications where sunlight and glare cause eyestrain and fatigue.

Amber

Blocks the blue portion of the visible light spectrum, creating maximum contrast enhancement, particularly in low light.

Light Blue

Reduce glare and the yellow tint often given off by industrial / sodium vapor lighting

General Markings

The ANSI/ISEA Z87.1-2015 standard proscribes certain markings for eye and face protection devices. In addition to markings that are required for all protectors, additional optional markings may be present to indicate a specific lens type or application as claimed by the manufacturer.

Required markings

A manufacturers mark or logo

The standard designation (Z87 or Z87-2 for prescription eyewear)

H = product has been tested on a smaller headform

NOTE: The location of the standard designation varies depending on the product configuration.

Optional markings

+ = protector is impact-rated

W (followed by a shade number) = suitable for certain welding applications

U (followed by a scale number) = ultraviolet light protector

L (followed by a scale number) = visible light (glare) protector

V (followed by a scale number) = infrared radiations protector

S = protector is a special purpose protection

V = lens is a variable tint lens

D3 = splash protector

D4 = dust protector

D5 = fine dust protector
